Resource originally created in English

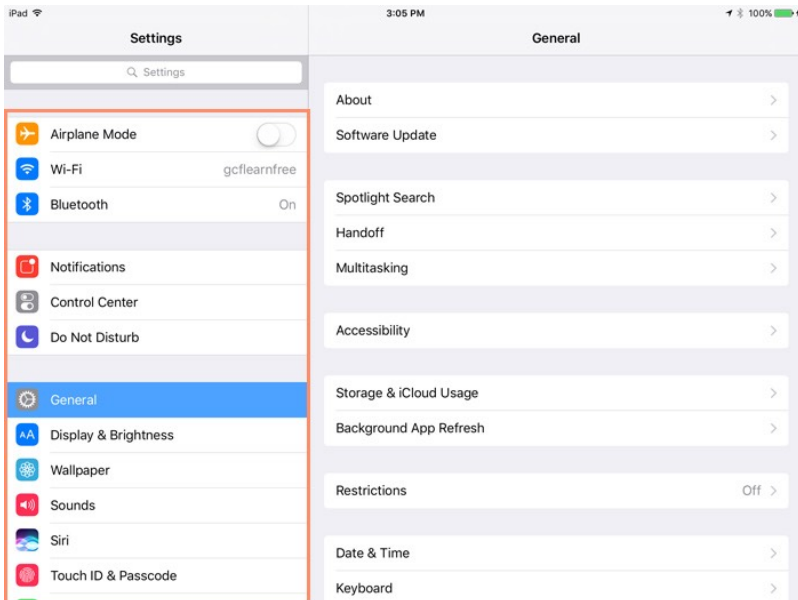

WORKSHOP DIRECTIONS

1 Introduction

Once you're more familiar with the iPad, you may want to take some time to review and customize your device's **settings**. Settings control everything from the way your iPad works to the data it shares with apps and other devices. You can open **Settings** by tapping the icon on your **Home** screen.

Settings gives you easy access to many things, including settings for your notifications and privacy. In this lesson, we will focus on the Touch ID & Passcode, General, and Privacy sections.

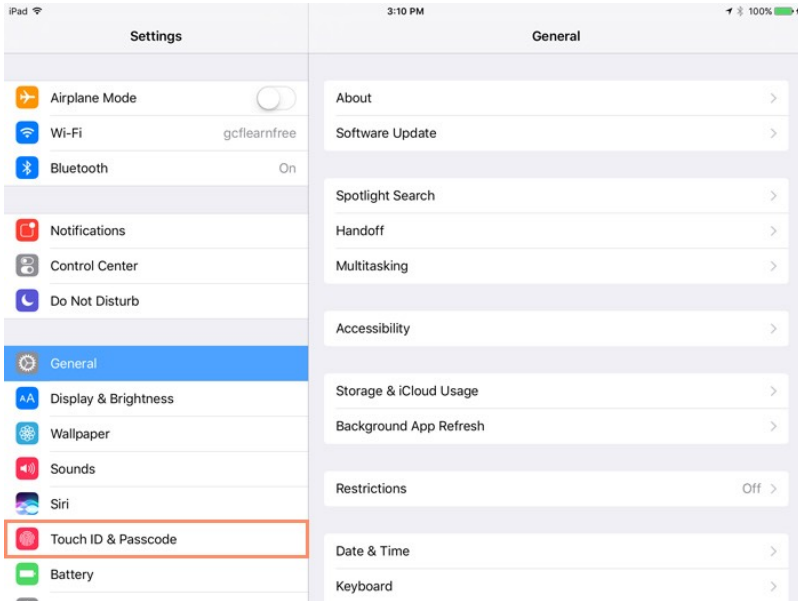

2 Touch ID & Passcode

Under **Touch ID & Passcode**, you can customize the security for unlocking your iPad. By default, the iPad requires a passcode to unlock it. You can also unlock your iPad using your fingerprint with a feature called **Touch ID**.

3 To change a passcode lock:

When you first start your iPad, you'll be prompted to create a passcode lock. If you ever want to change it, it's easy to do so with these simple steps.

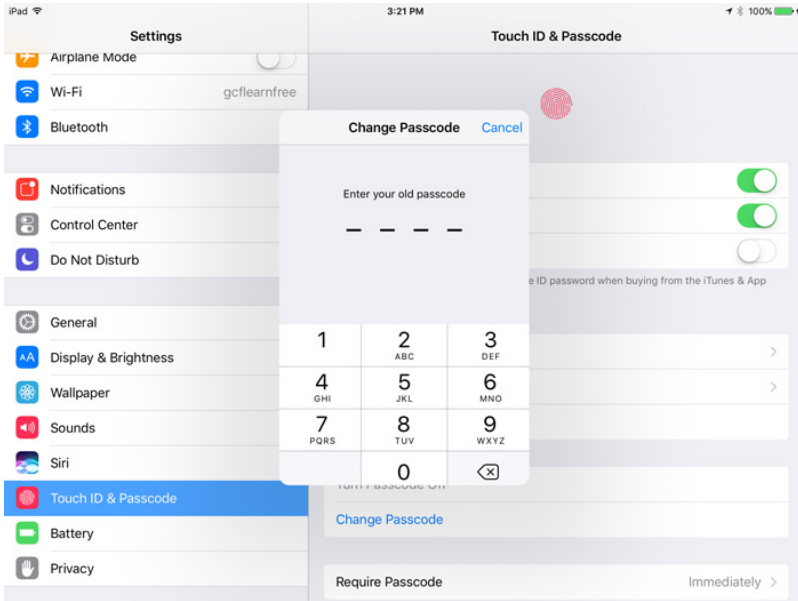

1. Tap the **Settings** icon on your **Home** screen, then tap **Touch ID & Passcode**.

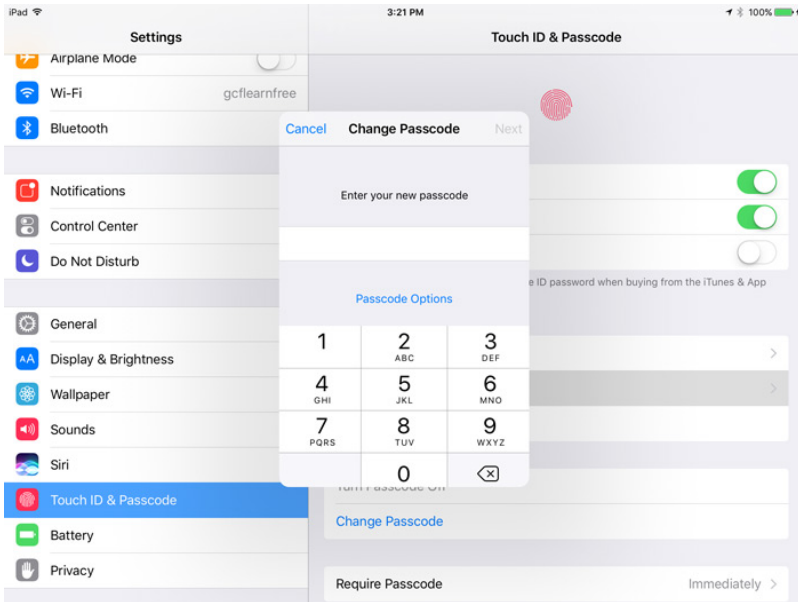

2. Tap **Change Passcode**.

3. Use the keypad to enter your current **passcode**.

4. The next screen will automatically appear, prompting you to enter a new passcode. Enter the new passcode. (You'll need to enter it twice to confirm.)

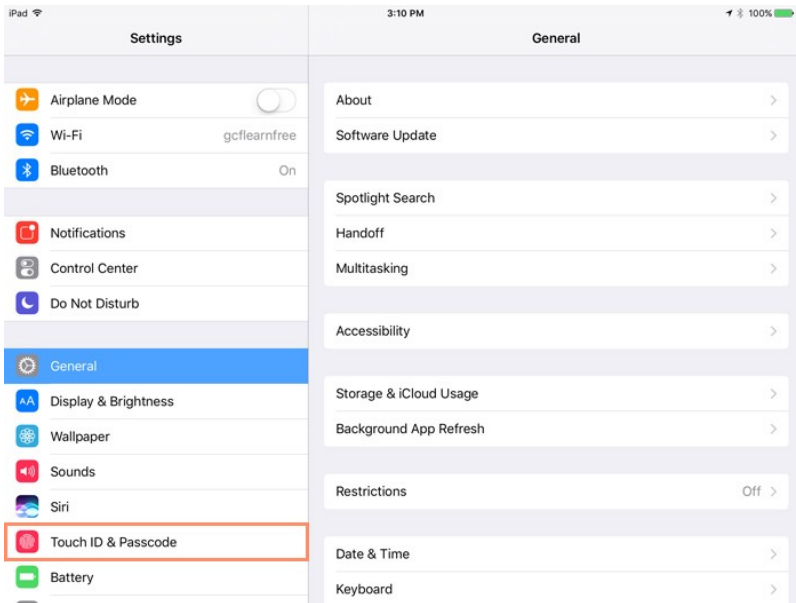

5. Your new passcode will be set.

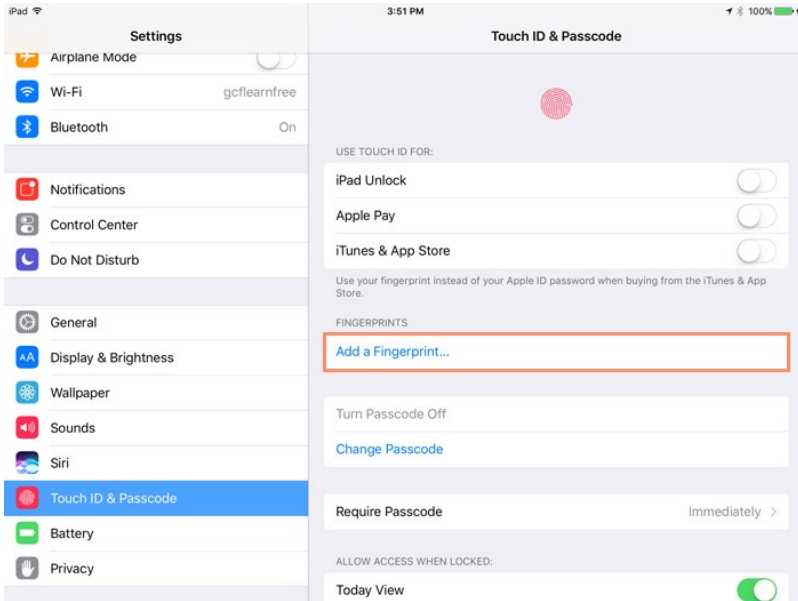

4 To set up Touch ID:

You can also set your iPad to unlock using your fingerprint. Instead of entering a passcode, you can simply place a finger on the **Home** button.

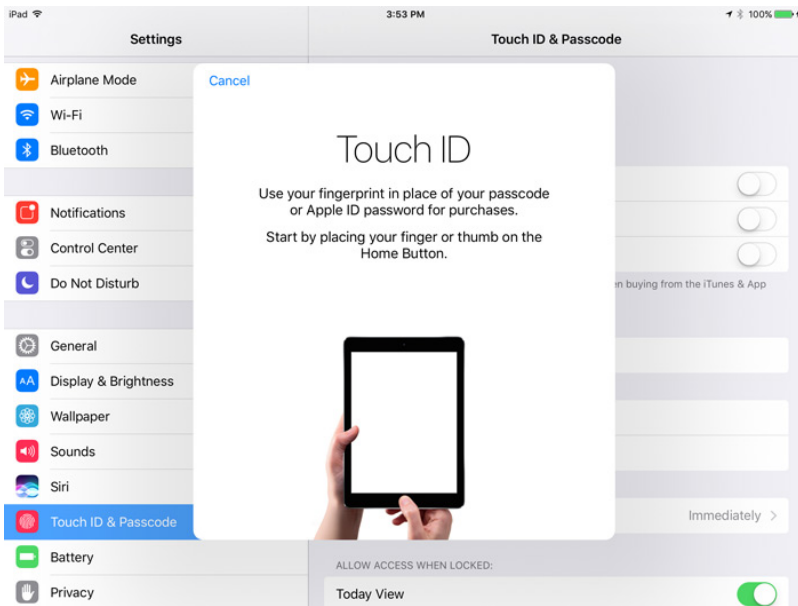

1. Tap the **Settings** icon on your **Home** screen, then tap **Touch ID & Passcode**.

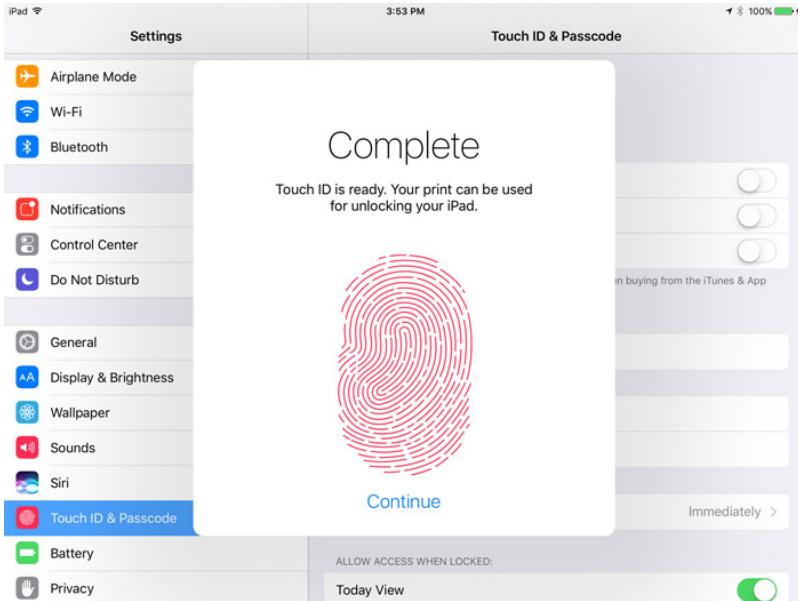

2. Input your passcode, then tap **Add a Fingerprint...**

3. Follow the instructions shown on the screen, and place a finger or thumb on the **Home button**. You'll need to touch the Home button repeatedly until the iPad gets a good read of your fingerprint.

4. Your fingerprint will be added, and you can now unlock your phone with Touch ID.

You can add multiple fingerprints to Touch ID, allowing you to use any number of your fingers or thumbs to unlock your iPad.

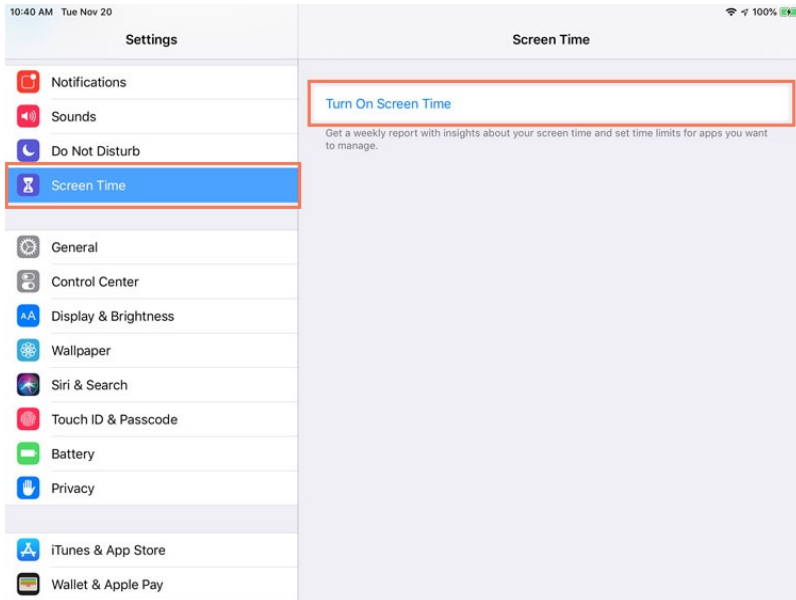

5 General

Under **General**, you can customize settings that control your storage, accessibility, and overall preferences.

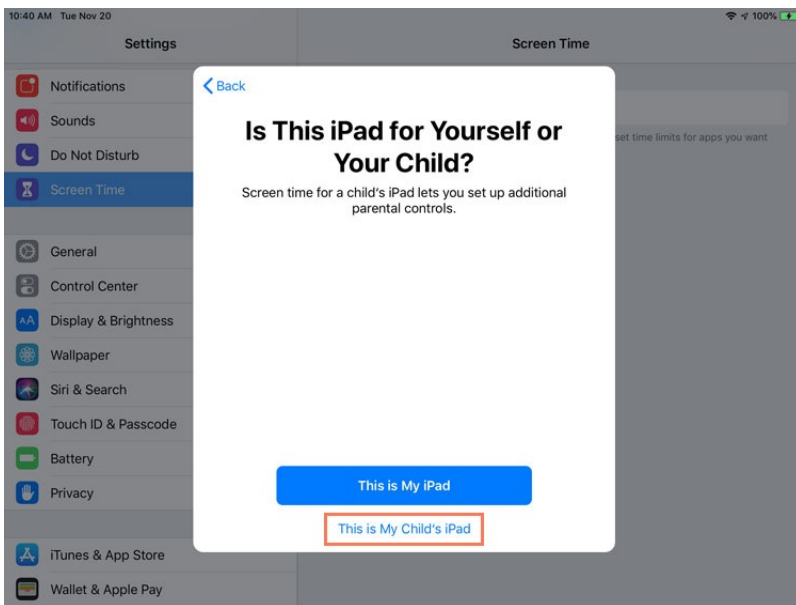

6 Using Screen Time to set restrictions

Restrictions act as parental controls. You can use this feature to limit kids' time on the iPad, set passcodes, and more. Restrictions can be turned on and changed in the **Screen Time** section of the **Settings** menu.

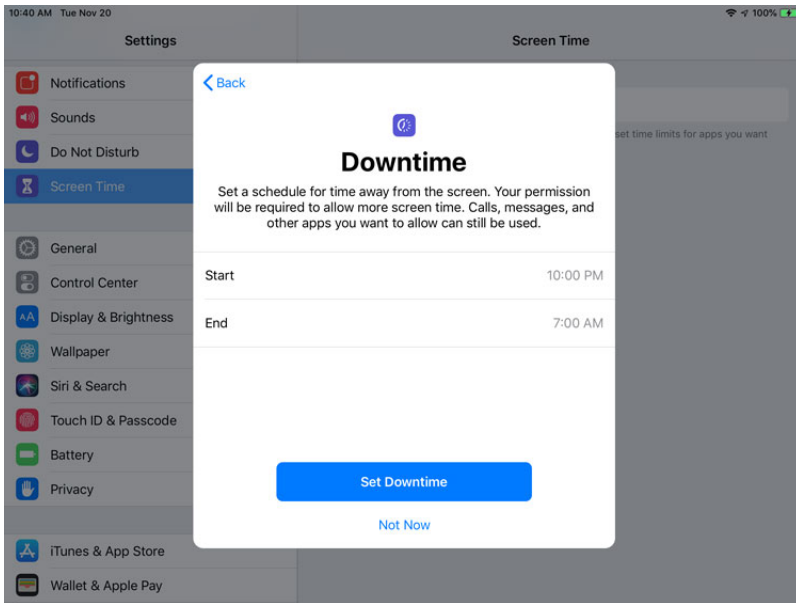

1. Tap **Screen Time**, then **Turn On Screen Time**.

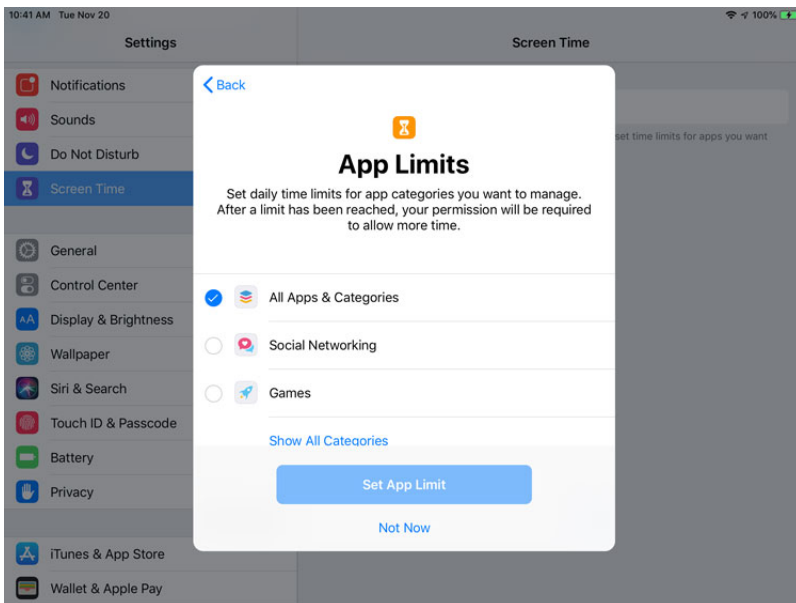

2. Tap **This is My Child's iPad**.

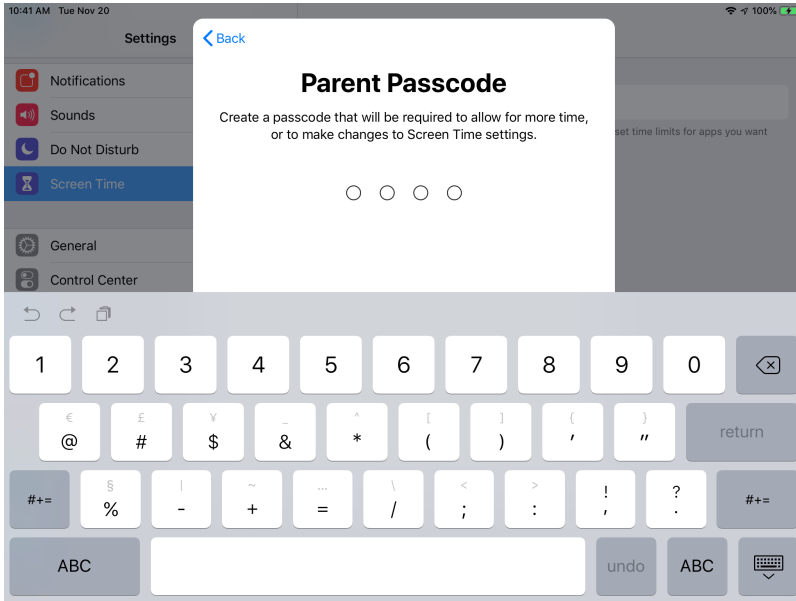

3. Set a **Start** and **End** time for when your child can use their iPad, then tap **Set Downtime**.

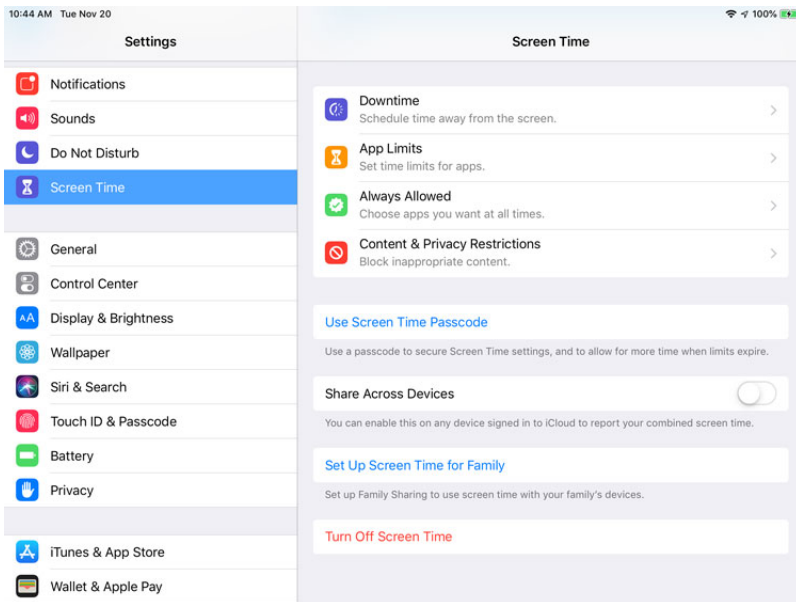

4. Choose **categories** that you'd like to place time limits on for your kids, then tap **Set App Limit**.

5. Enter a **passcode** that you can use to unlock the iPad when you want to change any **Screen Time** settings or allow your children to have more time on the device.

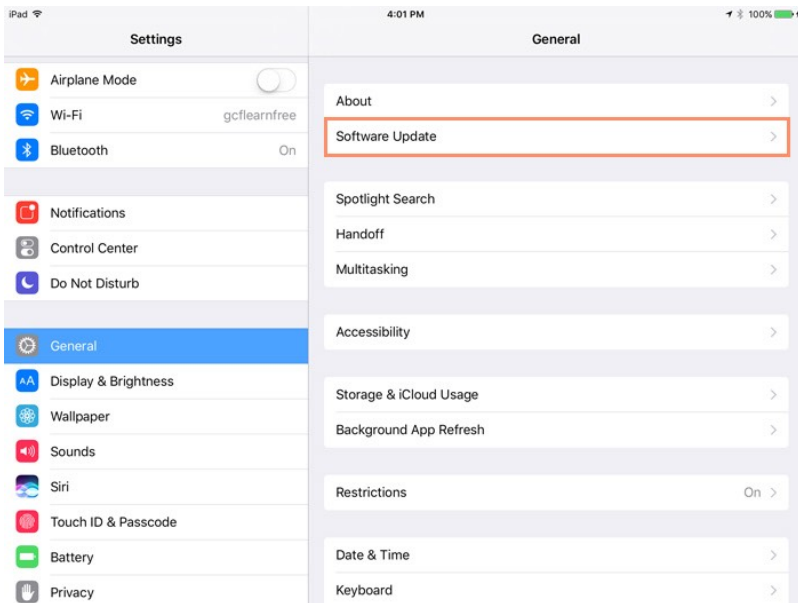

6. You can access and change more advanced settings in the **Screen Time** section of the **Settings** menu.

7

Updating your software

Software Update is where you'll download iOS updates from Apple. Updates frequently include bug fixes and other improvements designed to enhance your experience with the iPad. If an update is available, tap **Software Update**, then tap the **Install** button.

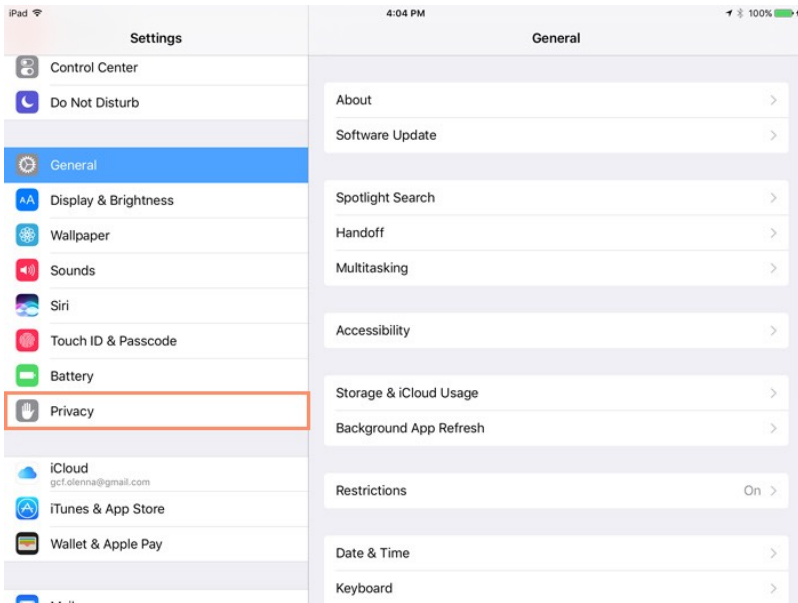

8 Privacy

Third-party apps sometimes request access to your **personal information**. For example, an app might request access to your **Twitter** account to make it easier for you to share things with your friends. Another app might request access to **Contacts** to help you connect with the people you know.

Apps will ask for permission before accessing your information for the first time. However, you can always manage these settings under **Privacy**.

9 To manage your privacy settings:

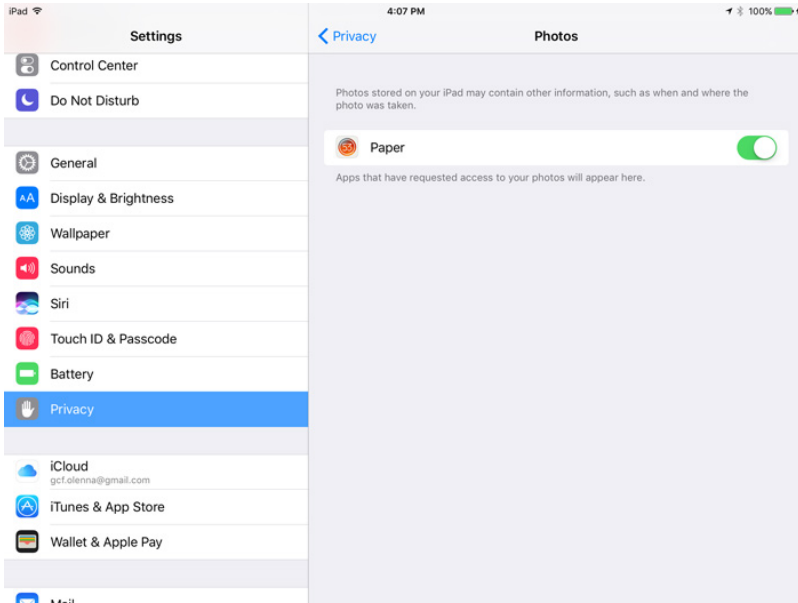

1. Tap the **Settings** icon on your **Home** screen.

2. Tap **Privacy** in the left pane.

3. Tap an item to view which apps (if any) have requested access to the information.

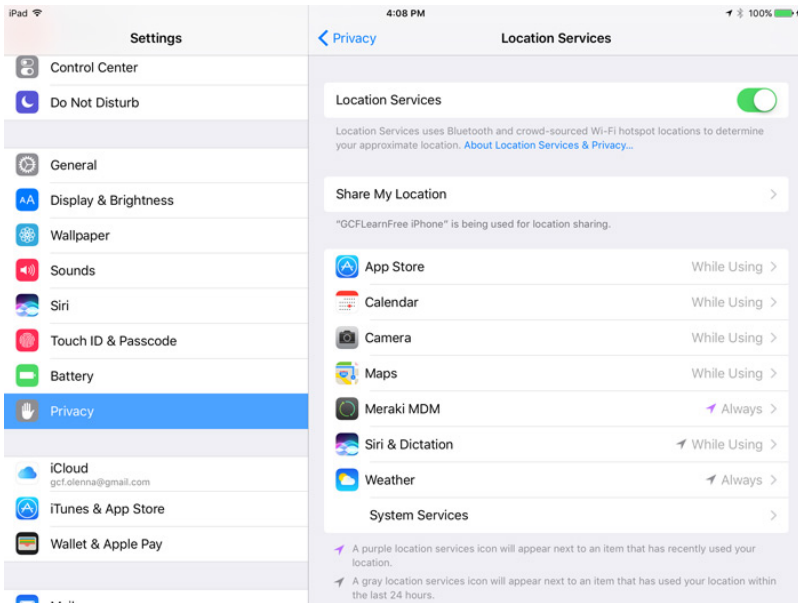

4. Turn controls **on** or **off** to enable or disable access for certain apps.

10 Location Services

Location Services is an optional setting that uses Wi-Fi and/or your cellular signal to determine your current location. Location data can be extremely useful for a variety of apps. For example, the **Maps** app can use this information to give you directions from your current location, while the **Weather** app can give you a local forecast.

Location data can also be used in ways you might not expect. For example, the **Camera** app can use it to tag photos and videos with their exact location (known as **geotagging**). If you then post a photo publicly online, you're also sharing the location data for that photo.

While it can be useful, some people may not feel comfortable sharing their location data in all of these situations. Fortunately, you can **turn off** Location Services for individual apps or for all of your apps. To modify these options, go to your **Privacy** settings, then tap **Location Services**.

11 To limit ad tracking:

Some third-party apps may use information from your iPad to serve you **targeted advertisements** based on your interests. These interests are based on the way you use your iPad, including your browsing history and installed apps. If you'd prefer not to receive targeted advertisements, you can **limit ad tracking**. This feature won't limit the number of ads you receive; it will simply stop third-party apps from using your personal information.

1. From **Privacy**, tap **Advertising**.
2. Turn the control **on** to limit ad tracking.
